**Re: Amendment of Part 90 of the Commission's Rules to Improve Access to
Private Land Mobile Radio Spectrum, WP Docket No. 16-261**

Dear Ms. Dortch:

I am the President and CEO of At Home Health Equipment, Inc., one of the largest retail suppliers of home medical equipment and services in the state of Indiana. The equipment and 24/7 nursing care that we provide our patients, caregivers and hospice organizations is critical to the overall health of the communities we serve.

At AHHE we have made it a priority to leverage recent advancements in technology for the benefit of our patients. For example, response time is critical in our business. We currently have 8 retail locations that collectively store thousands of pieces of high-value medical equipment. When a customer calls in with an urgent order, it's imperative that we know immediately where the equipment in need is located and which drivers and/or nurses are closest to that location for pickup and delivery to the customer. Barclay Knapp and his team at M2M Spectrum Networks have developed a turnkey solution that accomplishes this for us at a very affordable price. This is a great benefit to our business, our patients and our community.

I understand that this solution utilizes 800 MHz Guard and Expansion Band spectrum and I understand that the FCC seeks to promote optimal use of spectrum. Therefore, I argue that it is in the best interest of the public that the FCC allow for new entrants to apply for 800 MHz Expansion Band and Guard Band spectrum in a fair and competitive manner, without any period of priority given to incumbents.

Kind regards,
